#### Abstract

:- In the present work, the adoption of the program (Gaussian 09) to use the method of calculation the total ( Ab initio of method) according to the Hartree - Fock method (RHF), for the purpose of the expense of dimensional geometric (lengths and angles bond) when the geometry of a balanced, functions thermodynamic, some physical properties, charges for Anesthesia [ Thiazol derivative] mono \& bicyclic compounds.

The results study Heat formation $\left(\Delta \mathrm{H}_{\mathrm{f}}{ }^{0}\right.$ (in $\mathrm{kJ} /$ mole) by using (semi-empirical method PM3 model in MOPAC) for these molecules and the results showed that the compound $\mathrm{C}_{7} \mathbf{H}_{8} \mathbf{N}_{2} \mathrm{O}_{3} \mathbf{S}(\mathrm{~B})$ has less value which means high thermal stability than the other's. Calculation results have shown that the compound $\mathbf{C}_{\mathbf{7}} \mathbf{H}_{\mathbf{6}} \mathbf{N}_{\mathbf{2}} \mathrm{O}_{\mathbf{2}} \mathbf{S}_{9}(\mathrm{D})$ is more activity because it has the lower value of $\Delta \mathrm{E}$ and hardness $\eta$ and has high value of (G) Electrophilicity). Also the results have shown that the compound $\mathbf{C}_{7} \mathbf{H}_{8} \mathbf{N}_{2} \mathrm{O}_{3} \mathbf{S}(\mathbf{B})$ has highest value of thermodynamic functions $\left(E^{0}, H^{0}, G^{0}, A^{0}, C_{V}, C_{P}, S^{0}\right)$ The difference in results come according to the difference of substituted groups. The calculations were held in Karbala university.

Key words: RHF study , Anesthesia, Diazepam ,Electrophilicity.

## Introduction.

The mono \& bicyclic compounds are class of compounds well known for along time as anesthetic drugs in surgery such as diazepine compounds[1,2] which were first introduced for the treatment of anxiety $[3,4]$.
Diazepam (valium) is a class of drugs used as relaxants, minor tranquilizers, hypnotics and muscle relaxant because it is often seen in fortensic and clinical cases. It introduced in 1969 under brand name valium [5].

Diazepam (valium) is used to relive anxiety tension associated with anxiety disorder and muscle spasms as well as alcohol with drawl [6] , and other clinically uses [7-10].

## Journal University of Kerbala, Vol. 14 No. 3 Scientific . 2016

The activity of thio compounds due to the presence of sulphur atom in there structure, it has a wide spectrum of uses as a : selected HIV mutants [11], antibiotic [12], antitumor , dyes and in synthesis of polymers in thermal mold ability [13].
Many examples belonging to oxazepines, diazepines are documented ,but very little is known about thiazepine. 1,4-Benzothiazepine derivatives are of considerable interest because of their biological activity as a muscle relaxants [14,15].
Thiazepine contains two hetroatoms (nitrogen and sulphur) in seven membered ring [16].
(E)

## Computational details

Calculations of the title compound were carried out with( Gaussian09) software program using RHF/6-31G B3LYP basis sets to predict the molecular structure Calculations were carried out with Becke's three parameter hybrid model using the Lee-Yang- Parr correlation functional (B3LYP) method. Molecular geometries and physical properties.

## Results and Discussion. <br> Geometrical parameter.

In this research calculated the geometry (bond lengths and bond angels ) of the five molecules of derivatives Anesthesia. According to the results calculated and recorded in the (table 1and fig. 1). Show that each the bond $\mathrm{C}_{5}-\mathrm{N}_{6}$ in compound $\mathbf{C}$ has high value compared to other compounds studies it may be due to high electro - negative of $\mathrm{N}_{6}$ atom with substituted group, whereas for the same bond length for the compound $\mathbf{D}$ has less value, may be caused by the difference of electro - negative of $(\mathrm{N})$ with substituted groups. Also the bond $\mathrm{C}_{5}-\mathrm{N}_{3}$ in compound D has high value compared to other compounds studies it may be due to high electro - with drawing electron of carbonyl group and its single bond in this compound compare with other's.

## Journal University of Kerbala, Vol. 14 No. 3 Scientific . 2016

Also the change of the group substituted had effect on the value of the angles of the compounds studied in this research, have shown calculation in the (table 1and fig. 1). That the angles $\angle$ $\mathrm{S}_{4} \mathrm{C}_{5} \mathrm{~N}_{5}$ in compound $\mathbf{C}$ has high value, May be due to the big size of substitution groups of Chloride on the angles. Also the angle $\angle \mathbf{C}_{\mathbf{2}} \mathbf{S}_{\mathbf{4}} \mathbf{C}_{\mathbf{5}}$ the results showed that in compound $\mathbf{D}$ has high value may by to the seven- membered ring.

## Physical properties.

Depending on the Ab initio of method of calculation according to the Hartree Fock (HF) is calculate some physical properties of the molecules studied in this research; Dipole moments ( $\mu$ in Debye), energies (e V) of the high Occupied Molecular Orbital ( $\mathrm{E}_{\text {номо }}$ ) and the Lower Unoccupied Molecular Orbital ( $\mathrm{E}_{\mathrm{LUMO}}$ ) and according Koopmans theorem (the negative $\mathrm{E}_{\text {номо }}$ is equal to the ionization potential) the calculation has been ionization energies (e $V$ ), Also calculated the energy difference ( $\Delta \mathrm{E}, \mathrm{e}$ V), And finally calculated (Molecular Hardness) Hardness $(\eta)=1 / 2(E$ номо $-E_{\text {Lumo }}$ ), (Electron Affinity) $\mathrm{EA}=-E_{\text {LUMo }}$ according Koopmans theorem for N system of electrons[17-20]. that compound $\mathbf{C}_{7} \mathbf{H}_{\mathbf{6}} \mathbf{N}_{\mathbf{2}} \mathrm{O}_{\mathbf{2}} \mathbf{S}(\mathrm{D})$ is more activity because it has the lower value of $\Delta \mathrm{E}$ and hardness $\eta$ and has high value of (G) Electrophilicity) and $\left(\mathrm{E}_{\mathrm{LUMO}}\right)$ this means that this compound has more ability to lose electrons and be easier ionization compared to other compounds

## Journal University of Kerbala, Vol. 14 No. 3 Scientific . 2016

Also ,The MOPAC computational packages (semi-empirical method, PM3 model) employed to compute physical properties; heats of formation ( $\Delta \mathrm{Hf}, \mathrm{kJ} . \mathrm{mol}-1$ ) $[21,22]$. the results showed (Table 2) for the compound $\mathbf{C}_{7} \mathbf{H}_{8} \mathbf{N}_{2} \mathrm{O}_{3} \mathbf{S}(\mathrm{~B})$ has less value which means high stability than the other's.

## Thermodynamics functions

The fundamental vibration frequencies for five compound of Anesthesia molecules along with the rotational constants, obtained in this study, where used to calculate the vibration and rotation contributions to the thermodynamic functions .

Thermodynamics functions standard and heat capacity for the studied molecules listed Table: 3 looking at the calculation results show that each of the thermodynamic functions $\left(\mathrm{G}^{0}\right.$, $\left.\mathrm{A}^{0}, \mathrm{E}^{0}, \mathrm{H}^{0}\right)$ and ( $\mathrm{C}_{\mathrm{V}}, \mathrm{C}_{\mathrm{P}}$ )have the same gradient values (different the group substitutes), $\mathbf{B}>\mathbf{C}>\mathbf{D}>\mathbf{E}>\mathbf{A}$

## The Charges

The Calculated for all charges atoms of the molecules studied according to the method (HF) have shown calculation results of the charges (Table: 4) are each of the $\left(\mathrm{N}_{6}, \mathrm{~N}_{3}\right)$ has high value of charge (the lowest density electronic ), Perhaps the reason for this difference in electrical negative and molecular weight which increase the electronic density on nitrogen atom $\left(\mathrm{N}_{6}, \mathrm{~N}_{3}\right)$ As in the case of compound ( $\mathbf{A}, \mathbf{B}$ ).
This scientific fact indicates that the compound $(\mathbf{A}, \mathbf{B})$ can be use as a strong legend when it linked to metal complex formation,
C $>$ B $>\mathrm{E}>$ D

## Conclusion

Energetic properties with Standard thermodynamic functions have been investigated using quantum mechanics result by using RHF method with 6-31G B3LYP as basis sets, showed each of compounds (D,E) have heat of formation $(694.746,524.102) \mathrm{kJ} \mathrm{.mol}^{-1}$ that's mean these cyclic compounds more stable and it can use as drug than the others.
