Most Arab countries witness a wave of terrorism and radicalness

that inversely affected people's life and political stability by many ways. This phenomenon

has caused negative results on both individuals and society at all. It is ranged between psychological and physical impact. However, the terrorism issue has disseminated internationally from the beginning of the current centaury, where the word of "terrorism" and its derivatives such as "terrorist" and "counterterrorism" spread out dramatically in the world. In addition, crimes ratios have increased in all aspects and the terrorism became much more disturbing in practice. This situation requested to have increased awareness and impose punitive punishments for those who cause harm. Also spreading a true definition of freedom is needed in order to let people practice it without making any violation to freedom of other people.

However, Arab gulf countries are not isolated from terrorism which reflected on all countries in the region including Iraq, Syria, Yemen and GCC countries, this situation was a result of the emergence of ISIS armed terror groups. Furthermore, the disputes between Qatar, and Saudi Arabia, Bahrain and Egypt have complicated the situation in the gulf region. Hence, terrorism became much more destructive than other wars. We hope that the future will witness the end of terror radical thought, particularly the current days recorded victories of the Iraqi army forces and civil volunteers against ISIS terror groups in Mosul province.

Editor-in-Chief Assist. Prof. Dr. Yahya Humood Hassan
