Sustainability for Tradition Cities in The Past And The Contemporary Today

Abstract

This research is for general sustainable contemporary Architecture originated from the Islamic thought and from creates a sustainable urban environment through studding the concept of sustainability in general and that for local one in special. Achieving dependency of traditional cities on the comprehensive ecological approach , as all of our traditional old cities have the advantage of sustainability, preceding modern theories in achieving environmental and psychological integration, through meeting general human requirements with considering convenient between physical and spiritual sides, the most of our contemporary cities suffering lack in giving effect to this approach .

The research depart from the comprehensive ecological approach through attempting to explain town space system over its graduate levels, this to indicate the differences in space systems and its influence in forming the contemporary Urban environment structure and the losing of its permit graduates in the comprehensive and local level, from which some conclusions and recommendations were obtained in order to include the sustainable concept in the design and planning processes in Architectural and Planning work obtained from traditional Islamic Architecture .
