### **Abstract**

In this work new bisazo bis -1,3-oxazepine - 4,7- dione derivatives have been synthesized via cycloaddition reaction type [2+5→7] of phthalic and maleic anhydrides to some synthesized bisazoimine derivatives .

*ortho*-Tolidine was converted to the corresponding bisazoaldehyde derivative **1** via coupling reaction with phenoxide anion of 2-hydroxybenzaldehyde. Aldehyde groups in bisazoaldehyde derivative **1** was condensed with different primary amines and only one hydrazine derivative (cyclohexylamine, phenylhydrazine, 2,4-dimethylaniline, 4-methoxyaniline, aniline and 4-bromoaniline) in presence of glacial acetic acid as catalyst in absolute ethanol to give bisazoimine derivatives **2a-f** respectively. The resulting bisazoimine derivatives **2a-f** were then introduced in [2+5→7] cycloaddition reaction with each phthalic and maleic anhydrides in dry benzene to give new bisazo bis-1,3-oxazepine-4,7-dione derivatives **3a-f** and **4a-f** respectively.

All the synthesized target compounds **3a-f** and **4a-f** have been characterized by (C.H.N.) elementary micro analysis and the spectroscopic methods including FT-IR , <sup>1</sup>H NMR for compounds **3a-e** and **4a-e** and <sup>13</sup>C NMR for compounds (**3a**, **4a** and **4e**). The last step included preliminary evaluation of antibacterial activity for all target compounds **3a-f** and **4a-f** which were tested against *Staphylococcus aureus* (Gram positive) and *Escherichia coli* (Gram negative), these activities have been determined *in vitro* using disc diffusion method (Agar), the results revealed that some of compounds showed measurable activity as shown in table (9).

**Keywords:** bisazoimines , bisoxazepines, antibacterial activity ، اوكسازيبيانات ثنائية ، اوكسازيبيانات ثنائية ، فعالية ضد البكتريا

### **الخلاصة**

تم من خلال هذا العمل تحضير مشتقات ثنائية الازو ثنائية - 1،3 - اوكسازيبي-4،7-دايون وذلك باستعمال تفاعل الاضافة الحلقية [2+5→7] لانهدريدالفثالك و الماليك الى بعض مشتقات الازو ثنائية الحاوية على مجموعتي ازو المحضرة . تم أولاً، تحويل مركب *اورثو-توليدين* الى مشتق ثنائي الازو والديهيد **1** وذلك من خلال تفاعل الازدواج مع ايون الفينوكسيد السالب لمركب 2- هيدروكسي بنزالديهيد. ان تكاثف مجموعتي الازو والديهيد في مشتق الازو والديهيد الثنائي المحضر **1** مع مجموعتي الأمين في امينات اولية متنوعة ومشتق هيدرازين واحد (سابكلوهكسيل امين، فليل هيدرازين، 2،4- ثنائي مثيل انيلين، 4- ميثوكسي انيلين، انيلين، 4- بروموانيلين) بوجود حامض الخليك الثلجي كعامل مساعد في الأيثانول المطلق أدى إلى تكوين مشتقات الازوامين الثنائية **2a-f** على التوالي. تم إدخال مشتقات الازوامين الثنائية المحضرة **2a-f** في تفاعل إضافة حلقية نوع [2+5→7] مع كل من انهدريدالفثالك و الماليك في البنزين الجاف فتم الحصول على مشتقات 1،3- اوكسازيبي- 4،7-دايون ثنائية جديدة تحتوي في تركيبها على مجموعتي ازو **3a-f** و **4a-f** على التوالي .

تم تشخيص مركبات الازوكسازيبي ثنائية المحضرة **3a-f** و **4a-f** بوساطة التحليل الكمي العنصري الدقيق (C.H.N.) وكذلك بالطرق الطيفية المتضمنة مطيافية الأشعة تحت الحمراء ومطيافية الرنين النووي المغناطيسي للبروتون <sup>1</sup>H NMR للمركبات **3a-e** و **4a-e**، كما تم تشخيص المركبات (**3a** ، **4a** ، **4e**) بمطيافية <sup>13</sup>C NMR .

تضمنت الخطوة الأخيرة من البحث تقييم أولي للفعالية ضد البكتريا لجميع المركبات النهائية **3a-f** و **4a-f** والتي اختبرت فعاليتها ضد بكتريا *Staphylococcus aureus* الموجبة لصبغة كرام وبكتريا *Escherichia coli* السالبة لصبغة كرام وتم تعيين هذه الفعاليات خارج الجسم باستعمال طريقة الانتشار في الوسط الغذائي (الأكار). دلت النتائج المستحصلة بأن بعض المركبات أظهرت فعالية عالية وكما موضح في جدول (9).

## **1. Introduction**

Oxazepine refers to any unsaturated seven-membered ring containing an oxygen and nitrogen atom. The 1,3-oxazepine is a branch of many types of the heterocyclic oxazepine<sup>(1,2)</sup>. The core structure of 1,3-oxazepine-4,7-dione consists of a seven-membered ring along with two carbonyl groups.

Recently, the cycloaddition reaction type  $[2+5 \rightarrow 7]$  is used in synthesis of 1,3-oxazepine<sup>(3,4)</sup> and 1,3-oxazepane<sup>(3,5)</sup> rings. This type of cycloaddition reactions produces various 1,3-oxazepine derivatives.  $[2+5 \rightarrow 7]$  cycloaddition reaction involves addition of imine group as two-membered component to cyclic anhydrides such as phthalic, maleic and succinic anhydrides as five-membered components to form seven-membered ring. Benzoxazepine derivatives have a wide spectrum of biological activities including antibacterial<sup>(6,7)</sup>, antifungal<sup>(8)</sup>, antiviral<sup>(9)</sup>, anticonvulsant<sup>(10)</sup> and anticancer<sup>(11)</sup>. Amoxapine is used as a drug for sorrow and schizophrenia<sup>(12)</sup>.

Azo dyes constitute one of the largest and most varied groups of synthetic organic dyes in use today<sup>(13)</sup>. The pharmacological use of azo compounds originates from the discovery of the antibacterial action of Prontosil on streptococcal infections by Dog-magk<sup>(14)</sup> furthermore, azo compounds were reported to show a variety of biological activities including antibacterial<sup>(15)</sup>, antifungal<sup>(16)</sup>, pesticidal<sup>(17)</sup>, antiviral and anti-inflammatory activities<sup>(18)</sup>. Other applications include merging technologies like liquid crystals, organic photoconductors and non-linear optics<sup>(19)</sup> and pH indicators<sup>(20)</sup>.

## **2. Experimental**

### **2.1. General**

The chemicals used in this work were obtained from Merck, Fluka and Sigma-Aldrich and were used without further purification. Silica TLC plates were used with an aluminum backing (0.2 mm, 60 F<sub>254</sub>). The reactions were monitored by TLC and visualized by development of the TLC plates with an alkaline potassium permanganate dip or with Iodine vapor. Melting points were determined by Electro thermal Stuart melting point apparatus, GOWLLANDS, England and were uncorrected. The elemental analyses were recorded using E.A.G.E.R.-100, Carlo Erba, Italy, measurements were made at Metu Central Laboratory, Orta DoGu Teknik Üniversitesi, Turkey. Infrared spectra were recorded on SHIMADZU FTIR-8400S Infrared Spectrophotometer as potassium bromide discs. <sup>1</sup>H NMR spectra were recorded on Fourier transform Varian spectrometer, operating at 300 MHz with tetramethylsilane as internal standard and DMSO-d<sub>6</sub> as solvent, measurements were made at Metu Central Laboratory, Orta DoGu Teknik Üniversitesi, Turkey. <sup>13</sup>C NMR spectra were recorded on Fourier transform Varian spectrometer, operating at 75 MHz with tetramethylsilane as internal standard and DMSO-d<sub>6</sub> as solvent, measurements were made at Metu Central Laboratory, Orta DoGu Teknik Üniversitesi, Turkey. Autoclave was used to sterilize agar media, supplied from Prestige Medical-England. Incubator was used to maintain different temperature required for the growth of organism, supplied from Memert-Germany. Bisazoaldehyde derivative **1** was prepared following the method described by Acton<sup>(21)</sup>.

## **2.2. Synthesis methods**

### **2.2.1. General procedure for Synthesis of bisazoimine derivatives (2a-f)**

Bisazoaldehyde derivative **1** (0.002 mol, 0.956g) was dissolved in absolute ethanol (20 mL) containing two drops of glacial acetic acid, then equimolar amount (0.004 mol) of primary amines and only one hydrazine derivative (cyclohexylamine, phenylhydrazine, 2,4-dimethylaniline, 4-methoxyaniline, aniline and 4-bromoaniline) were added. The reaction mixture was refluxed with stirring on a water bath at 70 °C for (12-18 h.) . TLC (Et<sub>2</sub>O:*n*- hexane , 2 : 1) showed that the reaction was completed. The mixture was allowed to cool down to room temperature and the colored precipitate was filtered, then recrystallized from ethanol. Table (1) shows the structures , molecular formulas, molecular weights, melting points, yield % and R<sub>f</sub> values of the synthesized compounds **1** and **2a-f**.

### **2.2.2. General procedure for synthesis of bisazo bis -1,3- oxazepine-4,7-dione derivatives (3a-f)**

A mixture of equimolar amounts of bisazoimine derivatives **2a-f** (0.0006 mol) and phthalic anhydride ( 0.0012 mol, 0.1776 g) in dry benzene (20 mL) was refluxed with stirring on a water bath that 75°C for (17-24 h.) . TLC (EtOAc : *n*-hexane , 2 : 1) showed that the reaction was completed. Then, the solvent was removed under reduced pressure and the resulting colored solid was washed well with ether and recrystallized from ethanol. Table (2) shows the structures, molecular formulas, molecular weights, melting points, yield % and R<sub>f</sub> values of the synthesized compounds **3a-f** . The (C.H.N.) elementary micro analysis data of the synthesized compounds **3a-f** was listed in table (4).

### **2.2.3. General procedure for synthesis of bisazo bis -1,3-oxazepine-4,7-dione derivatives (4a-f)**

A mixture of equimolar amounts of bisazoimine derivatives **2a-f** (0.0006 mol) and maleic anhydride (0.0012 mol, 0.1176 g) in dry benzene (20 mL) was refluxed with stirring on a water bath at 75°C for (17-24h.). TLC (EtOAc :*n*- hexane,2 : 1) showed that the reaction was completed . Then, the solvent was removed under reduced pressure and the resulting colored crystalline solid was washed well with ether and recrystallized from ethanol. Table (3) shows the structures, molecular formulas, molecular weights , melting points, yield % and R<sub>f</sub> values of the synthesized compounds **4a-f** . Table (4) shows the (C.H.N.) elementary microanalysis data of the synthesized compounds **4a-f** .

### 3. Results and Discussion

A coupling reaction between the bisdiazonium salt of *ortho*-toluidine and equimolar quantity of phenoxide salt of 2-hydroxybenzaldehyde as coupling reagent at (0-5)°C afforded bis azoaldehyde derivative **1** as indicated in scheme (1).

Scheme (1): Synthesis of bisazoaldehyde derivative 1

FT-IR spectrum, fig.(2) of bisazoaldehyde derivative **1** showed disappearance of the sharp bands at (3468,3410)  $\text{cm}^{-1}$  and (3373,3338)  $\text{cm}^{-1}$  attributed to the asymmetric and symmetric stretching vibrations of amino groups (-NH<sub>2</sub>) in *o*-toluidine, the spectrum also showed disappearance of the sharp and strong band at 1624  $\text{cm}^{-1}$  due to the scissoring bending vibration of (-NH<sub>2</sub>) groups and appearance of sharp and strong band at 1653  $\text{cm}^{-1}$  assigned to the stretching vibration of carbonyl groups(C=O), this band was shifted towards lower frequency due to intramolecular hydrogen

bonding with *ortho*-hydroxy group<sup>(22)</sup>, the spectrum also appeared broad band at 3416 cm<sup>-1</sup> attributed to the stretching vibration of hydroxy group. Other bands with their interpretation were summarized in table (5).

A condensation reactions between bisazoaldehyde derivative **1** and some selective primary amines and only one hydrazine derivative (cyclohexylamine, phenylhydrazine, 2,4-dimethylaniline, 4-methoxyaniline, aniline and 4-bromoaniline) respectively in the presence of two drops of glacial acetic acid as catalyst in absolute ethanol resulted formation of bis-azoimine derivatives **2a-f** as shown in scheme (2).

Scheme (2) : Synthesis of bis-azoimine derivatives 2a-f

FT-IR spectra, figs.(3) - (8) at  $\nu$  (cm<sup>-1</sup>) (KBr) of all synthesized bis-azoimine derivatives **2a-f** illustrate good evidence that the reactions happened successfully by disappearing the strong band at 1653 cm<sup>-1</sup> belong to the stretching vibration of (C=O) group and appearing strong band at lower frequencies at the general range (1629-1600) cm<sup>-1</sup> attributed to the stretching vibration of imine groups (C=N). Other characteristic bands with their interpretation were summarized in table (5).

Table (5) : FT-IR data of the synthesized bisazoaldehyde derivative **1** and bis - azoimine derivatives 2a-f in cm<sup>-1</sup>

C-H$ , CH <sub>3</sub> ), 1350 and 1282 ( $\nu_{C-N}$ ), 1103 ( $\nu_{C-O,phenol}$ ),1072 ( $\nu_{C-Br}$ ),889 ,875, 825, 777, 740 and 694 ( $\delta_{o.o.p.C-H}$ ,benzene rings).

Tow series of bis-1,3-oxazepine derivatives **3a-f** and **4a-f** were obtained via a (2+5→7) cycloaddition reaction between equimolar amount of phthalic anhydride and maleic anhydride respectively as five-membered components and the synthesized bis-azoimine derivatives **2a-f** as two-membered components in dry benzene as indicated in schemes (3) and (4).

Scheme (3) : Synthesis of bisazo bis-1,3 oxazepine- 4,7-dione derivatives 3a-f

Scheme (4) : Synthesis of bisazo bis- 1,3 oxazepine- 4,7-dione derivatives 4a-f

The cycloaddition is believed to proceed via formation of four- membered cyclic transition state (i.e. concerted process) in which the participating orbitals should be in the same plane<sup>(23)</sup> as indicated in scheme (5).

Scheme (5) : Approximate transition state geometry for addition of phthalic anhydride to imine groups

(C.H.N.) elementary micro analysis, table (4) of bisazo bis -1,3 oxazepine derivatives **3a-f** and **4a-f** showed good agreement between the calculated and found values.

FT-IR spectra, figs.(9) - (14) of compounds **3a-f** illustrate good evidence that the cycloaddition reactions happened successfully through disappearing the strong band at the general range (1629-1600)  $\text{cm}^{-1}$  which attributed to  $\nu$  (C=N) and appearing of one or two bands at frequency relatively higher than that of (C=N) group at (1714 and 1656)  $\text{cm}^{-1}$ , 1693  $\text{cm}^{-1}$ , 1689  $\text{cm}^{-1}$ , 1691  $\text{cm}^{-1}$ , (1707 and 1680)  $\text{cm}^{-1}$ , (1716 and 1649)  $\text{cm}^{-1}$  and (1716 and 1656)  $\text{cm}^{-1}$  respectively attributed to the stretching vibrations of carbonyl groups (O=C-O) and (O=C-N) inside oxazepine ring respectively. It is important to refer that appearance only one band for stretching of (C=O) groups inside oxazepine ring due to the vibration coupling interactions. Other characteristic bands with their interpretation were summarized in table (6).

Table (6) : FT-IR data of the synthesized bisazo bis -1,3-oxazepine-4,7-dione derivatives (3a-f)

Com. no.	FT-IR bands
3a	3363 ( $\nu_{\text{O-H}}$ ), 3051 ( $\nu_{\text{C-H,benzene rings}}$ ), 2928 ( $\nu_{\text{as.C-H,CH}_2,\text{cyclohexane}}$ ), 2854 ( $\nu_{\text{s. C-H,CH}_2,\text{cyclohexane}}$ ), 1714 ( $\nu_{\text{C=O,O=C-O,oxazepine}}$ ), 1656 ( $\nu_{\text{C=O, O=C-N,oxazepine}}$ ), 1597 and 1481 ( $\nu_{\text{C=C,benzene rings}}$ ), 1452 ( $\delta_{\text{sciss. C-H,CH}_2,\text{cyclohexane}}$ ), 1371 ( $\delta_{\text{s. C-H, CH}_3}$ ), 1278 ( $\nu_{\text{C-N}}$ ), 1103 ( $\nu_{\text{C-O,phenol}}$ ), 891, 831, 759 and 702 ( $\delta_{\text{o.o.p.C-H,benzene rings}}$ ).
3b	3497 ( $\nu_{\text{O-H}}$ ), 3288 ( $\nu_{\text{N-H}}$ ), 3034 ( $\nu_{\text{C-H,benzene rings}}$ ), 2953 ( $\nu_{\text{as. C-H, CH}_3}$ ), 2874 ( $\nu_{\text{s. C-H, CH}_3}$ ), 1693 ( $\nu_{\text{C=O,O=C-O and O=C-N,oxazepine, vib.coupling}}$ ), 1597, 1572 and 1487 ( $\nu_{\text{C=C,benzene rings}}$ ), 1396 ( $\delta_{\text{s. C-H, CH}_3}$ ), 1274 ( $\nu_{\text{C-N}}$ ), 1115 ( $\nu_{\text{C-O,phenol}}$ ), 806, 748, 694 ( $\delta_{\text{o.o.p.C-H, benzene rings}}$ ).
3c	3406 ( $\nu_{\text{O-H}}$ ), 3080 and 3012 ( $\nu_{\text{C-H,benzene rings}}$ ), 2974 ( $\nu_{\text{as. C-H, CH}_3}$ ), 2897 ( $\nu_{\text{s. C-H, CH}_3}$ ), 2816 ( $\nu_{\text{C-H,oxazepine}}$ ), 1691 ( $\nu_{\text{C=O,O=C-O and O=C-N,oxazepine,vib.coupling}}$ ), 1587 and 1404 ( $\nu_{\text{C=C,benzene rings}}$ ), 1494 ( $\nu_{\text{as.NO}_2}$ ), 1280 ( $\nu_{\text{C-N}}$ ), 1070 ( $\nu_{\text{C-O,phenol}}$ ), 908, 829, 800, 740 and 673 ( $\delta_{\text{o.o.p.C-H, benzene rings}}$ ).
3d	3427 ( $\nu_{\text{O-H}}$ ), 3101 and 3014 ( $\nu_{\text{C-H,benzene rings}}$ ), 2923 ( $\nu_{\text{as. C-H, CH}_3}$ ), 2870 ( $\nu_{\text{s. C-H, CH}_3}$ ), 1707 ( $\nu_{\text{C=O,O=C-O,oxazepine}}$ ), 1680 ( $\nu_{\text{C=O,O=C-N,oxazepine}}$ ), 1514 ( $\nu_{\text{C=C,benzene rings}}$ ), 1394 ( $\delta_{\text{s. C-H, CH}_3}$ ), 1284 and 1255 ( $\nu_{\text{C-N}}$ ), 1072 ( $\nu_{\text{C-O,phenol}}$ ), 1030 ( $\nu_{\text{s.C-O-C,ether}}$ ), 902, 827, 787, 759 and 702 ( $\delta_{\text{o.o.p.C-H,benzene rings}}$ ).

3e	3319 ( $\nu_{O-H}$ ), 3130 and 3055 ( $\nu_{C-H, benzene\ rings}$ ), 2985 and 2923 ( $\nu_{as. C-H, CH_3}$ ), 2875 ( $\nu_s. C-H, CH_3$ ), 1716 ( $\nu_{C=O, O=C-O, oxazepine}$ ), 1649 ( $\nu_{C=O, O=C-N, oxazepine}$ ), 1602, 1543, 1506, 1491 and 1454 ( $\nu_{C=C, benzenerings}$ ), 1440 ( $\delta_{as. C-H, CH_3}$ ), 1394 ( $\delta_s. C-H, CH_3$ ), 1330 and 1242 ( $\nu_{C-N}$ ), 1087 ( $\nu_{C-O, phenol}$ ), 891, 827, 750 and 690 ( $\delta_{o.o.p.C-H, benzenerings}$ ).
3f	3315 ( $\nu_{O-H}$ ), 3055 ( $\nu_{C-H, benzene\ rings}$ ), 2924 ( $\nu_{as. C-H, CH_3}$ ), 2860 ( $\nu_s C-H, CH_3$ ), 1716 ( $\nu_{C=O, O=C-O, oxazepine}$ ), 1656 ( $\nu_{C=O, O=C-N, oxazepine}$ ), 1610, 1548 and 1485 ( $\nu_{C=C}$ ), 1386 ( $\delta_s. C-H, CH_3$ ) 1282 and 1247 ( $\nu_{C-N}$ ), 1111 ( $\nu_{C-O, phenol}$ ), 1074 ( $\nu_{C-Br}$ ), 885, 819, 796, 763, 732 and 698 ( $\delta_{o.o.p.C-H, benzene\ rings}$ ).

FT-IR spectra, figs.(15) - (20) of compounds **4a-f** provide good evidence that the cycloaddition reactions took place successfully through disappearing the strong band at the general range (1629-1600)  $cm^{-1}$  which assigned to  $\nu$  (C=N) and appearing one or two bands at frequency relatively higher than that of (C=N) group at (1703 and 1656)  $cm^{-1}$ , 1691  $cm^{-1}$ , (1716 and 1641)  $cm^{-1}$ , 1701  $cm^{-1}$ , 1699  $cm^{-1}$  and 1705  $cm^{-1}$  respectively attributed to the stretching vibrations of carbonyl groups (O=C-O) and (O=C-N) inside oxazepine ring respectively. It is important to refer that appearance only one band for stretching of (C=O) groups inside oxazepine ring due to the vibration coupling interactions. Other characteristic bands with their interpretation were listed in table (7).

Table (7) : FT-IR data of the synthesized bisazo bis -1,3-oxazepine- 4,7-dione derivatives 4a-f

Com. no.	FT-IR bands
4a	3236 ( $\nu_{O-H}$ ), 3055 ( $\nu_{C-H, benzene\ rings}$ ), 2935 ( $\nu_{as. C-H, CH_2, cyclohexane}$ ), 2858 ( $\nu_s. C-H, CH_2, cyclohexane$ ), 1703 ( $\nu_{C=O, O=C-O, oxazepine}$ ), 1656 ( $\nu_{C=O, O=C-N, oxazepine}$ ), 1591, 1523 and 1481 ( $\nu_{C=C, benzene\ rings}$ ), 1375 ( $\delta_s. C-H, CH_3$ ), 1313 and 1280 ( $\nu_{C-N}$ ), 1097 ( $\nu_{C-O, phenol}$ ), 846, 742 and 704 ( $\delta_{o.o.p.C-H, benzene\ rings}$ ).
4b	3498 ( $\nu_{O-H}$ ), 3360 ( $\nu_{N-H}$ ), 3095 ( $\nu_{C-H, benzene\ rings}$ ), 2939 ( $\nu_{as. C-H, CH_3}$ ), 2838 ( $\nu_s. C-H, CH_3$ ), 1691 ( $\nu_{C=O, O=C-O\ and\ O=C-N, oxazepine, vib. coupling}$ ), 1572 and 1516 ( $\nu_{C=C, benzene\ rings}$ ), 1392 ( $\delta_s. C-H, CH_3$ ) 1365 and 1267 ( $\nu_{C-N}$ ), 1118 ( $\nu_{C-O, phenol}$ ), 869, 749 and 716 ( $\delta_{o.o.p.C-H, benzene\ rings}$ ).
4c	3429 ( $\nu_{O-H}$ ), 3087 and 3019 ( $\nu_{C-H, benzene\ rings}$ ), 2976 and 2920 ( $\nu_{as. C-H, CH_3}$ ), 2860 ( $\nu_s. C-H, CH_3$ ), 1716 ( $\nu_{C=O, O=C-O, oxazepine}$ ), 1641 ( $\nu_{C=O, O=C-N, oxazepine}$ ), 1604, 1547 and 1489 ( $\nu_{C=C, benzene\ rings}$ ), 1458 ( $\delta_{as. C-H, CH_3}$ ), 1379 ( $\delta_s. C-H, CH_3$ ), 1344 and 1287 ( $\nu_{C-N}$ ), 1105 ( $\nu_{C-O, phenol}$ ), 893, 854, 825, 810, 767 and 712 ( $\delta_{o.o.p.C-H, benzene\ rings}$ ).
4d	3265 and 3203 ( $\nu_{O-H}$ ), 3063 and 3018 ( $\nu_{C-H, benzene\ rings}$ ) 2952 and 2922 ( $\nu_{as. C-H, CH_3}$ ), 2843 ( $\nu_s. C-H, CH_3$ ), 1701 ( $\nu_{C=O, O=C-O\ and\ O=C-N, oxazepine, vib. coupling}$ ), 1622 ( $\nu_{C=C, oxazepine}$ ), 1550, 1523, 1506 and 1404 ( $\nu_{C=C, benzene\ rings}$ ), 1325 ( $\delta_s. C-H, CH_3$ ), 1305 and 1278 ( $\nu_{C-N}$ ), 1176 ( $\nu_{C-O, phenol}$ ) 1033 ( $\nu_s. C-O-C, ether$ ), 887, 833, 817, 803, and 756 ( $\delta_{o.o.p.C-H, benzene\ rings}$ ).
4e	3275 and 3207 ( $\nu_{O-H}$ ), 3101 and 3009 ( $\nu_{C-H, benzene\ rings}$ ), 2879 ( $\nu_s. C-H, CH_3$ ), 2854 ( $\nu_{C-H, oxazepine}$ ), 1699 ( $\nu_{C=O, O=C-O\ and\ O=C-N, oxazepine, vib. coupling}$ ), 1626 ( $\nu_{C=C, oxazepine}$ ), 1545 and 1494 ( $\nu_{C=C, benzenerings}$ ), 1448 ( $\delta_{as. C-H, CH_3}$ ), 1325 and 1269 ( $\nu_{C-N}$ ), 1153 ( $\nu_{C-O, phenol}$ ), 900, 850, 832, 759 and 715 ( $\delta_{o.o.p.C-H, benzene\ rings}$ ).
4f	3510, 3425, 3357, 3279 and 3200 ( $\nu_{O-H}$ ), 3080 and 3014 ( $\nu_{C-H, benzenerings}$ ), 2942 ( $\nu_{as. C-H, CH_3}$ ), 2870 ( $\nu_s. C-H, CH_3$ ), 1705 ( $\nu_{C=O, O=C-O\ and\ O=C-N, oxazepine, vib. coupling}$ ), 1624 ( $\nu_{C=C, oxazepine}$ ), 1576, 1543, 1516 and 1491 ( $\nu_{C=C, benzene\ rings}$ ), 1392 ( $\delta_s. C-H, CH_3$ ), 1315 and 1257 ( $\nu_{C-N}$ ), 1107 ( $\nu_{C-O, phenol}$ ), 1074 ( $\nu_{C-Br}$ ), 900, 858, 767, 736 and 682 ( $\delta_{o.o.p.C-H, benzenerings}$ ).

**<sup>1</sup>H NMR spectra of bis-1,3-oxazepine derivatives**

<sup>1</sup>H NMR spectrum fig. (21) , (300 MHz, DMSO) of compound **3a** showed the following signals at  $\delta$  (ppm) : The signal at (1.061-1.344) ppm attributed to protons (a) in cyclohexane rings,(quintet, 4H, 4 $\times$ Ha). The signal at (1.401-1.591) ppm belong to protons (b) in cyclohexane rings,( quintet, 8H, 8 $\times$ Hb). The signal at 1.70 ppm due to protons (c) in cyclohexane rings,( quartet, 8H, 8 $\times$ Hc). The signal at 1.811 ppm assigned to protons (d) in cyclohexane rings,( quintet, 2H, 2 $\times$ Hd). The signal at (2.442-2.569) ppm attributed to DMSO solvent. The singlet signal at 2.889 ppm assigned to methyl groups protons,( 6H, 2 $\times$ CH<sub>3</sub>). The signal at (3.675-3.690) ppm due to H<sub>2</sub>O in DMSO. The signals of aromatic protons and protons of (C-H) groups inside oxazepine rings appeared at the range (6.850-9.140) ppm. The signals of phenolic hydroxy groups protons appeared at 10.447 ppm as sharp,(11.382-11.993),14.114 and 14.665 ppm as broad, ( 2H, 2 $\times$ H-O).

The interpretation of <sup>1</sup>H NMR spectra for other bis- 1,3- oxazepine derivatives (**3b-e**) was carried out following the interpretation described for bis- 1,3- oxazepine derivative **3a** and listed in table (8).

<sup>1</sup>H NMR spectrum, fig. (26), (300 MHz, DMSO) of compound **4a** showed the following signals at  $\delta$  (ppm): The signal at (1.021-1.352) ppm attributed to protons (a) in cyclohexane rings,(quintet, 4H, 4 $\times$ Ha). The signal at (1.395-1.582) ppm belong to protons (b) in cyclohexane rings,( quartet, 8H, 8 $\times$ Hb). The signal at (1.684-1.800) ppm attributed to protons (c) in cyclohexane rings,( quartet, 8H, 8 $\times$ Hc). The signal at 1.885 ppm due to protons (d) in cyclohexane rings,( quintet, 2H, 2 $\times$ Hd). The signal of DMSO solvent appeared at (2.439-2.570) ppm. The two signals at (2.713 -2.736) ppm and 2.878 ppm assigned to methyl groups protons,(6H, 2 $\times$ CH<sub>3</sub>). The broad signal at (3.338 - 3.613) ppm belong to H<sub>2</sub>O in DMSO solvent. The spectrum illustrates good evidence that the cycloaddition reaction happened successfully and formed the desired product, oxazepine derivative **4a**, by appearing two doublet signals at (6.220 - 6.261) ppm and (6.446 - 6.488) ppm assigned to olefinic (C-H) protons ( e and f) respectively inside oxazepine rings. The signal at 6.088 ppm may be due to olefinic (C-H) proton (e) in *cis* position to (C=O) group, so its signal is shifted towards high field region.The signals of aromatic protons and protons of (C-H) inside oxazepine rings appeared at the range (6.848 - 9.202) ppm. The two signals at 10.374 ppm and 11.625 ppm belong to protons of phenolic hydroxy groups, ( 2H, 2 $\times$ H-O).

The interpretation of <sup>1</sup>H NMR spectra for other bis- 1,3- oxazepine derivatives (**4b-e**) was carried out following the interpretation described for bis- 1,3- oxazepine derivative **4a** and listed in table (8).

**<sup>13</sup>C NMR spectra of bis-1,3-oxazepine derivatives (3a, 4a and 4e)**

<sup>13</sup>C NMR spectrum, fig. (31), (75 MHz, DMSO) of compound **3a** showed the following signals at  $\delta$  (ppm): 17.79 (C1, 2 $\times$ C1), 25.18 (C2, 2 $\times$ C2), 25.75 (C3, 4 $\times$ C3), 32.52 (C4, 4 $\times$ C4), 48.41 (C5, 2 $\times$ C5). The spectrum appeared twelve signals at the range (118.98 - 145.76) attributed to aromatic carbons and carbons (C-N) of oxazepine rings. The signal at 168.09 ppm attributed to carbons of (O=C=O) groups for oxazepine ring. The signal at (168.33 -168.64) ppm assigned to carbons of (O=C-N) groups for oxazepine rings.

Appearance of signals of carbonyl groups carbon atoms in the down field region illustrates good evidence for formation of oxazepine rings.

<sup>13</sup>C NMR spectrum, fig. (32), (75 MHz, DMSO) of compound **4a** showed the following signals at  $\delta$  (ppm) : The signal at 17.79 ppm attributed to methyl groups carbons (2C, 2 $\times$  CH<sub>3</sub>). The signals at (24.77, 32.16 and 45.45) ppm attributed to carbons of cyclohexane rings. The signal of aromatic carbons, olefinic carbons and carbons (C-N) of oxazepine rings appeared at the rings (116.21-149.75) ppm. The signals at (163.83-167.57) ppm assigned to carbons of (O=C=O) groups of oxazepine rings. The signals at 190.97 belong to carbons of (O=C=N) groups of oxazepine rings.

Appearance of signals of carbonyl groups carbon atoms in the down field region illustrates good evidence for formation of oxazepine rings.

<sup>13</sup>C NMR spectrum, fig. (33), (75 MHz, DMSO) of compound **4e** showed the following signals at  $\delta$  (ppm): The signal at 17.80 ppm assigned to methyl groups carbons (2C, 2 $\times$  CH<sub>3</sub>). The signal of

aromatic carbons, olefinic carbons and carbons (C-N) of oxazepine rings appeared at the range (119.97-145.88) ppm. The signals at 163.68 ppm and 167.33 ppm attributed to carbons of (O=C=O) groups inside oxazepine rings. The signal at 191.06 ppm assigned to carbons of (O=C-N) groups inside oxazepine rings.

Appearance of signals of carbonyl groups carbon atoms in the down field region illustrates good evidence for formation of oxazepine rings.

Table (8): <sup>1</sup>H NMR data of the synthesized bis- 1,3- oxazepine derivatives (3a-e) and (4a-e)

Com. no.	Structure	δ (ppm)
3a		1.061-1.344 (quintet, 4H, 4×Ha), 1.401-1.591 (quintet, 8H, 8×Hb), 1.70 (quartet, 8H, 8×Hc), 1.811 (quintet, 2H, 2×Hd), 2.442-2.569 (DMSO solvent), 2.889 (s, 6H, 2×CH <sub>3</sub> ), 3.675-3.690 (H <sub>2</sub> O in DMSO), 6.850-9.140 (Ar-H and C-H protons of oxazepine rings), 10.447, 11.382-11.993, 14.114 and 14.665 (2H, 2×H-O phenolic).
3b		2.403-2.569 (DMSO solvent), 2.735 (s, 6H, 2×CH <sub>3</sub> ), 3.228-3.496 (H <sub>2</sub> O in DMSO), 4.221-4.293 and 4.526 (2H, 2×N-H), 6.769-8.257 (Ar-H and C-H protons of oxazepine rings), 10.627 and 11.143 (2H, 2×H-O phenolic).
3c		2.437-2.570 (DMSO solvent), 2.636 (s, 3H, 3×Ha), 2.705- 2.728 (s, 3H, 3×Hb), 2.771-2.796 (s, 6H, 6×Hc), 3.145-3.625 (H <sub>2</sub> O in DMSO solvent), 7.157-7.880 (Ar-H and C-H protons of oxazepine rings), 12.894-13.482 <sub>br</sub> (2H, 2×O-H O phenolic).
3d		2.437 - 2.570( DMSO solvent), 2.722- 2.728 and 2.771- 2.795 (6H, 2×CH <sub>3</sub> ), 3.091- 3.547 (H <sub>2</sub> O in DMSO solvent 3.733 and 3.819 (6H, 2×CH <sub>3</sub> O), 6.918 - 9.179 (Ar-H and C-H protons of oxazepine rings), 12.939 - 13.334 <sub>br</sub> (2H, 2×O-H phenolic).
3e		2.436-2.569 (DMSO solvent), 2.787 (s, 6H, 2×CH <sub>3</sub> ), 3.274- 3.404 (H <sub>2</sub> O in DMSO solvent), 7.044 - 9.189 (Ar-H and C-H protons of oxazepine rings), 10.329 and 10.386 (2H, 2×O-H phenolic).
4a		1.021-1.352 (quintet, 4H, 4×Ha), 1.395-1.582 (quartet, 8H, 8×Hb), 1.684-1.800 (quartet, 8H, 8×Hc), 1.885 (quintet, 2H, 2×Hd), 2.439-2.570 (DMSO solvent), 2.713 -2.736 and 2.878 (6H, 2×CH <sub>3</sub> ), 3.338 - 3.613( H <sub>2</sub> O in DMSO solvent), 6.220-6.261(d, 2H, 2×He), 6.446-6.488 (d, 2H, 2×Hf), 6.848-9.202 (Ar-H and C-H protons of oxazepine rings), 10.374 and 11.625 (2H, 2×H-O phenolic).
4b		2.404 -2.575 ( DMSO solvent), 2.729-2.774 (6H, 2×CH <sub>3</sub> ), 3.120 - 3.501( H <sub>2</sub> O in DMSO), The signal of (N-H) protons may be interacted with the broad signal of H <sub>2</sub> O in DMSO. 5.973 (2H, 2×Ha), 6.106 (2H, 2×Hb), 6.773 -8.617 (Ar-H and C-H protons of oxazepine rings), 10.594 and 11.123 (2H, 2×H-O phenolic).
4c		2.430-2.575 (DMSO solvent), 2.723-2.735 (6H, 6×Ha), 2.770 - 2.793 (6H, 6×Hb), 3.136-3.921(H <sub>2</sub> O in DMSO solvent) 6.178 and 6.311 (4H, 4× C-H olefinic C-H protons in structure of oxazepine rings), 7.155-9.148 (Ar-H and C-H protons of oxazepine rings), 10.391 (s, 2H, 2×H-O phenolic) .
4d		2.437-2.570 (DMSO solvent), 2.765-2.785 (s, 6H, 2×CH <sub>3</sub> ), 3.308-3.665 (H <sub>2</sub> O in DMSO solvent), 3.798-3.813 and 3.880-3.969 (6H, 6×H <sub>3</sub> C-O), 6.211- 6.282 (t, 2H, 2×Ha), 6.382-6.515 (2H, 2×Hb), 6.833- 9.165 (Ar-H and C-H protons of oxazepine rings), 10.388 - 10.479 and 13.356-13.555 (2H, 2×O-H phenolic).

4e		2.436-2.570 (DMSO solvent), 2.739-2.780 (6H, 2×CH <sub>3</sub> ), 3.307-3.496 (H <sub>2</sub> O in DMSO solvent), 6.196 -6.498 (4H, 4×C-H, olefinic protons inside oxazepine rings) 7.065 -9.180 (Ar-H and C-H protons of oxazepine rings), 10.395 and 11.524 (2H, 2×H-O phenolic) .

### Antibacterial activity

Pharmacological or biological activity is an expression describing the beneficial or adverse effects of a drug on living matter. The synthesized compounds were screened for their antibacterial activity using *Staphylococcus aureus* and *Escherichia coli* .

#### 1. *Staphylococcus aureus*

*Staphylococcus aureus* is also known as golden cluster seed. It is a Gram positive bacteria and it is found in water, dust and air<sup>(24)</sup>. *S. aureus* may cause skin infections that look like pimples or boils, swollen and painful<sup>(25)</sup>.

#### 2. *Escherichia coli*

often abbreviated as *E. coli*, is a type of bacteria commonly found in the digestive systems of animals. One specific strain can cause serious digestive system upset, however, leading to diarrhea and nausea, which can leave an infected person weak and dehydrated. It may also produce a toxin that damages the kidneys and weakens the small intestine walls in children. Part of the reason that this bacteria is so dangerous is because there is no effective cure for an infection<sup>(26)</sup>

### Antibacterial tests

In this work, the antibacterial test was carried out according to the disc diffusion method. All synthesized bis-1,3-oxazepine compounds **3a-f** and **4a-f** were assayed for their antibacterial activity in *vitro* against one strain of Gram-positive bacteria (*Staphylococcus aureus*) and one strain of Gram-negative bacteria (*Escherichia coli*). Prepared agar and petridishes were sterilized by autoclaving for 15 min. at 121°C. The agar plates were surface inoculated uniformly from the both culture of the tested microorganism. In the solidified medium suitably spaced apart holes were made all 6 mm in diameter. These holes were filled with 40 µL of the prepared compounds (5 mg of the compound dissolved in 1mL of DMSO solvent). These plates were incubated at 37 °C for 24h. for both bacteria. The zones of microbial growth inhibition around the discs were measured in (mm). The results of preliminary screening tests are presented in table (9).

Table (9):The antibacterial activities of the synthesized bis-1,3- oxazepine compounds 3a-f and 4a-f

Bacteria	<i>Staphylococcus aureus</i> (Gram-positive)	<i>Escherichia coli</i> (Gram-negative)
Com. no.	Diameter of inhibition zone in (mm)	
3a	14	-
3b	-	-
3c	-	-
3d	22	-
3e	13	16
3f	16	20
4a	11	14
4b	-	-
4c	-	13
4d	15	-
4e	20	-
4f	-	11

Key of symbols :

- Highly active = +++ (inhibition zone > 19 mm)  
 Moderately active = ++ (inhibition zone 18-15 mm)  
 Slightly active = + (inhibition zone 14-11 mm)  
 Inactive = - (inhibition zone <5 mm)

Gentamycin as control drug	Staphylococcus aureus (Gram-positive)	Escherichia coli (Gram-negative)
	Diameter of inhibition zone in (mm)	
10 Mg/mL	18	15
100 Mg/mL	23	19

From the data obtained , it is found clearly that compounds **3d** and **4e** show higher activity against Gram-positive bacteria (*Staphylococcus aureus*). Compounds **3f** and **4e** appeared medium activity. Compound **3a**, **3e** and **4a** showed weak activity, while the other compounds **3b**, **3c**, **4b**, **4c** and **4f** show no activity against this type of bacteria.

In case of Gram-negative (*Escherichia coli*), it is found that only compound **3f**, which containing azo group, shows higher activity. Compound **3e** showed medium activity. Compounds **4a**, **4c** and **4f** appeared weak activity, while the other compounds **3a**, **3b**, **3c**, **3d**, **4b**, **4d** and **4e** show no activity against this type of bacteria.
